- 3) घागरी वाजविणे — to defame / to get defamed

Marathi तत्सम-तद्भव : Exam Pairs

A sure question in the Marathi paper — glance once before the exam:

सूर्य → सूरज | चंद्र → चांद | अग्नि → आग | पद्म → कमल

हस्त → हात | अक्षी → डोळा | कर्ण → कान | दुग्ध → दूध

प्रभात → पहाट | लता → वेल | वृक्ष → झाड | ताल → तळ

स्वर्ण → सोने | ताम्र → तांबे | लवण → मीठ | अन्न → अण्णा

Remember : Tatsam = pure Sanskrit form; Tadbhav = evolved form

Frequently asked pairs — सूर्य-सूरज, अग्नि-आग, दुग्ध-दूध

Apabhransha means : the further-evolved popular form

e.g. आम्र (Apabhransha : अंब) → आंबा (Marathi)

Before answering, first find the root Tatsam; then track the Tadbhav shift

Check each pair while writing — one letter changes the meaning

Trick : Tatsam = mother (root); Tadbhav = daughter (changed); Apabhransha = granddaughter

Arithmetic : Percentage, Profit-Loss Tricks

10% of any number = shift the decimal one place (e.g. 10% of 240 = 24)

15% trick : 10% + its half (e.g. 15% of 240 = 24 + 12 = 36)

Profit % = $(\text{Selling Price} - \text{Cost Price}) / \text{Cost Price} \times 100$

Loss % = $(\text{Cost Price} - \text{Selling Price}) / \text{Cost Price} \times 100$

Average = sum of all numbers / total count

Square of a number ending in 5 : $35^2 = (3 \times 4)$ then 25 = 1225

$85^2 = (8 \times 9)$ then 25 = 7225 — multiply by next digit, add 25 at the end!

Multiply by 11 : $11 \times 25 = 2 \mid (2+5) \mid 5 = 275$ (sum sits in the middle!)

Divisibility : by 3 → digit-sum in the 3-table; by 9 → digit-sum in the 9-table

By 4 → check if the last two digits divide by 4

By 8 → check if the last three digits divide by 8

Trick : Percentage in exam = 2 steps; find 10% first, then add the rest

Maths : Speed-Time-Distance & Work-Time

Speed = Distance / Time; Distance = Speed $\times$ Time; Time = Distance / Speed

km/hr $\rightarrow$ m/s : multiply by 5/18 (e.g. 72 km/hr = 20 m/s)

m/s $\rightarrow$ km/hr : multiply by 18/5 (e.g. 20 m/s = 72 km/hr)

Equal distance at two speeds (a and b): average speed = $2ab/(a+b)$

Train crossing time = (train length + bridge length) / speed

Work-Time : A does a job in 10 days, B in 15 days

$\rightarrow$ daily work : $1/10 + 1/15 = 1/6 \Rightarrow$ together done in 6 days!

Pipe-Tank : filling pipe counts + and emptying pipe counts -

Age sums : take present age = x; 5 years ago = x-5, later = x+5

Compound Interest : Amount = Principal $(1 + \text{rate}/100)^{\text{time}}$ — exams mostly ask 2 years

Trick : Learn 72 km/hr = 20 m/s by heart — 72 $\rightarrow$ 20, 36 $\rightarrow$ 10

Reasoning : Part 2 (Analogy, Blood Relation, Direction)

Analogy (A:B :: C:?) — spot the relation of the first pair; apply it to the second

e.g. Foot : Walking :: Eye : ? → what does the eye do? = Seeing

Blood relation — Bhacha = sister's son; Putnya = brother's son (learn Marathi terms)

Mavashi = mother's sister; Mama = mother's brother — draw a family tree first!

Count every 'of' in the question; climb that many steps down to the answer

Direction-Distance : facing East → left hand = North, right = South

Facing West → left hand = South, right = North (reverse!)

Clock trick : each hour = 30° ; the minute hand moves 6° per minute

Opposite directions make 180° ; overlapping hands make 0°

In age problems, frame equations first; count later — no hurry!

Trick : In direction sums, do the final layout on paper only; not in your head!

— Knikvira Digital | Handwritten Vahi Notes Vol. 2 (English), Page 13

Science : Chemical Symbols & Disease-ID

H_2O = water | CO_2 = carbon dioxide | NaCl = common salt

CaCO_3 = limestone (raw material of the cement industry!)

H_2SO_4 = sulphuric acid (called the 'king' of chemicals)

NaOH = caustic soda; NH_3 = ammonia; CH_4 = methane (gobar gas)

Tuberculosis — *Mycobacterium tuberculosis* (bacteria; lungs)

Malaria — *Plasmodium* parasite; spread by female *Anopheles* mosquito

Dengue & Chikungunya — caused by *Aedes* mosquito (virus)

Typhoid — *Salmonella* bacteria (through polluted water/food)

Diabetes — low insulin raises blood sugar

Polio — a viral disease; OPV vaccine made India polio-free (2014)

Trick : Mosquito = malaria/dengue | Bacteria = TB/typhoid | Virus = dengue/polio

— *Knikvira Digital | Handwritten Vahi Notes Vol. 2 (English), Page 14*

NITI Aayog (2015) — the body that replaced the Planning Commission

Finance Commission (Art. 280) — recommends Centre-State tax sharing

Trick : In GNP, after 'G' think 'net foreign' — keep the order in mind
